
(a) vacancy cluster
area removed, $C > 0$
(b) inserted island
area added, $C < 0$
(c) rotated patch
torque, $\mathrm{Im}\, C \neq 0$
(d) vacancy + island pair
$\sum C \approx 0$ (dipole)
(e) edge dislocation
Burgers $b \neq 0$
atomic layer
twisted moiré
lens, $\varphi_m = -90^\circ$
swallow radius $\sqrt{2}R$
lens, $\varphi_m = +90^\circ$
swallow radius $\sqrt{2}R$
lens, $\varphi_m = 180^\circ$
swallow radius $2R$
no lens: local only
(field $\sim 1/\tilde{z}^2$)
not a lens: moiré
dislocation $B = A^{-1}b$
